

CH2M HILL Australia expands into construction management

CH2M HILL Australia, in alliance with Sydney Water and selected partners, will upgrade 330 sewage pumping stations (SPS) between 2000 and 2005. These SPSs are critical elements of the sewerage systems serving Sydney's population of four million.

From time to time, these pumping stations have overflowed as a result of high wet-weather flows or electrical and mechanical failures. The contract is primarily focused on addressing the problem of overflow, although improvements will also provide for future growth and improved operational reliability.

CH2M HILL Australia has been active in the wastewater design/build market for several

years, yet has traditionally relied on others to provide construction management expertise. With the award of the SPS contract, CH2M HILL Australia is breaking this trend by providing full construction management capability.

The CH2M HILL Australia office relocated to new offices (above) on Dec. 10.

The new contact information is:

Level 7, 9 Help Street
CHATSWOOD NSW 2067
Australia

PO Box 5392

OMI wins decade in Hood River

The Hood River City Council recently approved a 10-year contract renewal for OMI. OMI has served Hood River, Ore., since 1983, making it the company's second most tenured client.

"This renewal consummates what will be a partnership of at least 28 years," said Thom Day, regional business manager. "Once again, we have been rewarded for superior delivery of services and our ability to control costs and exceed customer expectations. Thanks to our entire Hood River staff and everyone who has contributed to our success."
