

## Glen Daigger welcomed into National Academy of Engineering

Glen Daigger

Glen Daigger has been elected to the National Academy of Engineering, an honor among the highest professional distinctions that can be accorded an engineer.

Daigger received this recognition for his important contributions in combining the theory and practice of wastewater-nutrient control and for improving the practice of environmental engineering worldwide. He

is the second CH2M HILL employee to be elected to NAE; the first was Chairman Emeritus Jim Poirot.

In recognition of this award, Dr. Daigger, a 23-year veteran of CH2M HILL, was quick to indicate that it really represents the efforts of his colleagues at CH2M HILL.

"This recognition would not have been possible except for the exceptional platform for professional growth provided by

CH2M HILL and the outstanding efforts of the many collaborators I have had the pleasure to work with over the years," he said. "In many ways, this award represents the combined efforts of my colleagues in the Water and EE&S Business Groups over the years. I hope that these colleagues will treasure this award as much as I do."

NAE membership honors those who have made "important contributions to engineering theory and practice, including significant contributions to the literature of engineering theory and practice" and those who have demonstrated accomplishment in the "pioneering of new fields of engineering, making major advancements in traditional fields of engineering, or development/implementing innovative approaches to engineering education."

The approximately 2,300 members of NAE represent only 0.2 percent of the total number of engineers practicing in the United States today.
