

Daigger reference book translated into Chinese

With four technical books to his credit, Glen Daigger, chief technology officer for the Water Business Group, is well known in academic and professional circles.

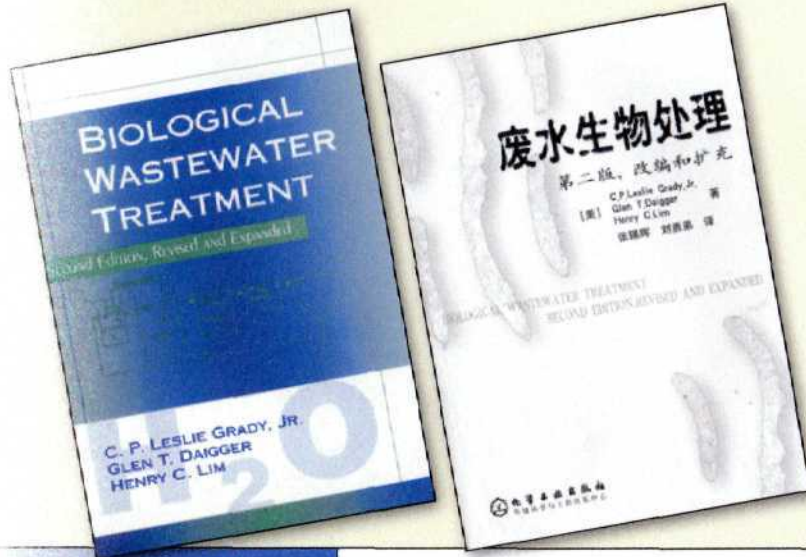

One of Daigger's books, *Biological Wastewater Treatment: Principles and Practice*, is "the bible of biological wastewater treatment," said Bruce Johnson,

a global technology leader in the Water Business Group. "All the new people in this field coming into the firm today are familiar with it, and I use it at least once a week."

The Association of Environmental Engineers and Science Professors stated in a review of the publication, "this book will be of value to our students long after they graduate, and the book will assume an honored space in their professional bookshelves."

Now, this wealth of information has been translated for the Chinese audience.

About four years ago during business trips to China, Daigger shared the English version of the book with leaders in the field. Impressed with its contents and wanting to make it available to Chinese professionals, they called on local publishers, who then contacted the book's publisher, Marcel Dekker.

Glen Daigger's book, *Biological Wastewater Treatment*, has been translated and is now available in China.
